camela planter

100313-s, 100313-d

Inspired by the fluid motion of a traditional Spanish skirt, *Camela*, meaning “garden-land”, is an elegant, multifunctional planting solution. Its billowing skirt offers a comfortable resting point for passers-by in high-traffic environments.

Available in 75 L and 245 L capacities, *Camela* features a specialised self-watering system to ensure plant longevity with minimal maintenance. Fabricated from UV-resistant, recyclable polyethylene, it is suited to both indoor and outdoor environments.

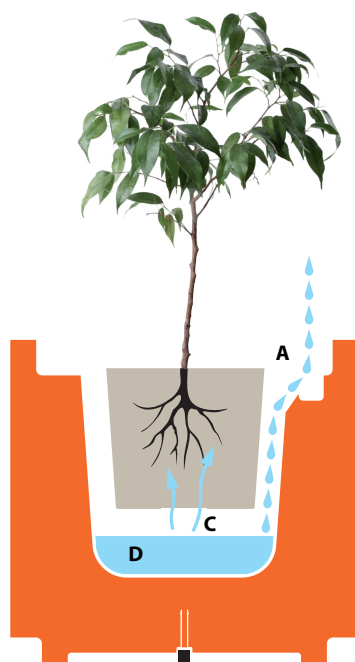

Beyond its sculptural beauty, *Camela* also serves as a high-capacity reservoir, capable of storing up to 540 L of water, adding a unique functional layer for resource management or disaster relief.

planter sub-irrigation 120603

For longer plant life and 60% less water usage than traditional planters sub-irrigation maintains your plants for longer. It is recommended to water using the filler port only and to gauge the water level by inserting a dipstick through the filler port.

internal planter

All internal planters are enclosed systems with a wicking system to keep the soil moist. It allows a reservoir of water in the planter sealed by the filler cap to prevent any potential mosquito infestation. Growing pots are suspended on rim of interior water reservoir. Designed from 10 inch/ 250mm pots up to 12inch/ 300mm.

external planter

External planters are fitted with a wicking system and overflow to prevent root damage through sodden or waterlogged soil. The reservoir of water in the planter is sealed by the filler cap to prevent potential mosquito infestation. Promote healthier plants while maintaining total water control with our unique overflow system.

- A** filler port
- B** bung (overflow external only)
- C** wick
- D** water reservoir
